About the Authors	<i>v</i>
Preface	<i>vii</i>
List of Mathematical Symbols	<i>ix</i>

Part I Financial Mathematics

Chapter 1 Interest Accumulation and Time Value of Money	3
1.1 Accumulation Function and Amount Function	4
1.2 Simple and Compound Interest	4
1.3 Frequency of Compounding	6
1.4 Effective Rate of Interest	10
1.5 Rates of Discount	12
1.6 Force of Interest	15
1.7 Future and Present Values of a Single Payment	18
1.8 Equation of Value	22
1.9 Summary	25
Exercises	26
Chapter 2 Annuities	33
2.1 Annuity-immediate	34
2.2 Annuity-due	37
2.3 Perpetuity, Deferred Annuity and Annuity Values at Other Times	39
2.4 Annuities under Other Accumulation Methods	42
2.5 Varying Interest Rates: Spot and Forward Rates	44
2.6 Payment Periods, Compounding Periods and Continuous Annuities	50
2.7 Variable Annuities	54
2.8 Term of Annuity and Rate of Interest	57
2.9 Summary	59
Exercises	60

Chapter 3	Rates of Return	65
3.1	Internal Rate of Return	66
3.2	One-period Rate of Return	70
3.3	Rate of Return over Multiple Periods	74
3.4	Portfolio Return	78
3.5	Capital Budgeting, Unequal Lending and Borrowing Rates	81
3.6	Summary	85
	Exercises	86
Chapter 4	Amortization and Sinking Fund	95
4.1	Balance of the Loan: Prospective and Retrospective Methods	96
4.2	Amortization	99
4.3	Sinking Fund	101
4.4	Varying Installments and Varying Interest Rates	107
4.5	Summary	111
	Exercises	111
Chapter 5	Bonds	117
5.1	Basic Concepts	118
5.2	Bond Evaluation	120
5.3	Bond Amortization Schedule	123
5.4	Valuation between Coupon-payment Dates	127
5.5	Callable Bonds	130
5.6	Yield-to-maturity	134
5.7	Other Measures of Bond Yield	137
5.8	Summary	138
	Exercises	139
Chapter 6	Bond Management	147
6.1	Macaulay Duration and Modified Duration	148
6.2	Duration for Price Correction	153
6.3	Convexity	156
6.4	Some Rules for Duration	157
6.5	Immunization and Duration Matching	159
6.6	Shortcomings of Duration Matching and Some Extensions	164
6.7	Passive versus Active Bond Management	165
6.8	Summary	166
	Exercises	167

Chapter 7 Applications 177

- 7.1 Comparing Interest of Loans: Equivalent Nominal Rate 178
- 7.2 Flat Rate Loan and Flat Rate Discount Loan 180
- 7.3 Loan Charges and Regulatory Reporting 183
- 7.4 Short Sales 186
- 7.5 Crediting Interest: Investment-year Method and Portfolio Method 187
- 7.6 Stock Price Indices 189
- 7.7 Some Common Financial Instruments 192
- 7.8 Inflation and Real Rate of Interest 194
- 7.9 Summary 195
- Exercises 195

Chapter 8 Stochastic Interest Rates 201

- 8.1 Yield Curve and Theories of Term Structure 202
- 8.2 Random Scenario Model 205
- 8.3 Independent Lognormal Model 208
- 8.4 Autoregressive Model 213
- 8.5 Dynamic Term Structure Model 214
- 8.6 An Application 216
- 8.7 Summary 219
- Exercises 220

Part II Actuarial Mathematics**Chapter 9 Survival Models and Life Contingencies** 229

- 9.1 Survival Distribution Function 230
- 9.2 Actuarial Notations 232
- 9.3 Parametric Survival Models 235
- 9.4 Life Table 239
- 9.5 Fractional Age at Death 248
- 9.6 Summary 250
- Exercises 251

Chapter 10 Life Insurance, Life Annuities and Net Premiums 257

- 10.1 Basic Concepts 258
- 10.2 Life Insurance Policies 259
- 10.3 Life Annuities 261
- 10.4 Net Premiums 266

10.5 Net Single Premium	266
10.6 Net Level Premium and Net Limited-pay Premium	275
10.7 Summary	278
Exercises	283
Chapter 11 Short-term Risk Models for Life Insurance	291
11.1 Claim Amount Distribution of Homogeneous Risks	292
11.2 Claim Amount Distribution of Heterogeneous Risks	296
11.3 The De Pril Recursion	298
11.4 Contingent Benefit Amounts	301
11.5 Summary	305
Exercises	305
Appendices	313
Answer Key	321
Index	331
