报告摘要 Abstract

Advancements in ICT such as smart devices, IoT, cloud computing, etc. have coalesced to offer powerful new channels for data capture. This, together with new machine learning and data analytics tools, is enabling us to examine big data, in an effort to uncover hidden patterns, unknown correlations and other useful information. This talk presents several ongoing investigations, covering the domains of health, transport and learning, where we apply big data analytics to examine the world around us, to unravel the complexities and intricacies that have significant implications to ourselves and our future generations.
