基于大数据的中国药物滥用预防与控制

Prevention and Control on Drug Use in China Based on Big Data

贾忠伟教授 | 北京大学医学部教授

报告摘要 Abstract

The lancet commissions encouraged the drug policies considering public health in respond to the increasing drug users worldwide. Against the traditional strategies to crack down drug users, what is happening in China against new situation? Generally, the system on prevention and control drug use can be divided into four stage-early education (such as 6.27 program, which focus on younger people 10-25 year old), community drug detoxification, compulsory isolated detoxification and community drug rehabilitation. More and more support from humanism care and public health have been involved in the prevention and control on drug users, which indicates that prevention and control drug users is system engineering. In this presentation, the speaker will present how to integrate data from internet and traditional observation to infer the behaviors and social network among MSM population which is generally regarded as the high risk drug users.
