The Chinese University of Hong Kong The Centre for Quality of Life Results of the Quarterly Survey (September 2011) on Public Perception of the Economic Conditions

The Centre for Quality of Life at The Chinese University of Hong Kong (CUHK) conducted a survey on the public perception of the economic conditions from September 27 to 28, 2011. A total of 504 Hong Kong residents aged 18 or above took part in the survey and answered questions about their family financial situation, their perception towards the business environment, the economic outlook, as well as their sentiment over consumption.

Table 1 presents the survey questions and results conducted in June 2011 and September 2011 respectively. It was revealed that 31% of the respondents said their families were financially "worse off" than a year ago, increased by 5 percentage points from the survey results in June 2011, while 11% said that they were "better off" than a year ago, dropped 8 percentage points. 57% said "the same", increased by 3 percentage points.

On consumer confidence, 17% of the respondents thought it was a good time to buy major household goods, while 61% said the opposite and 23% said they "don't know or it's difficult to tell". Comparing with the findings in June, those saying "yes" decreased by 2 percentage points while those saying "no" increased by 3 percentage points.

There were 27% of the respondents believed they would be financially "worse off" in the coming year, increased by 1 percentage point from the June survey. 15% believed their families would be "better off", dropped by 5 percentage points from the previous survey. Those believed that they would be "the same" was 47%, increased by 3 percentage points.

There were 48% and 35% of the respondents expected the business environment of Hong Kong in the coming year would be "mediocre" and "bad" respectively. Only 10% of the respondents perceived the business environment would be "good" in the coming year. Comparing with the June survey, those saying "bad" increased by 8 percentage points while those saying "good" decreased by 3 percentage points.

27% of the respondents said they were "optimistic" and 31% found themselves "pessimistic" about the economic conditions of Hong Kong for the coming five years. Comparing with the results in June, those saying "optimistic" decreased by 2 percentage points while those saying "pessimistic" increased by 2 percentage points.

The survey also found that 38% of the respondents expected the employment situation would "deteriorate" in the coming year and 16% thought it would "improve". Comparing with the June survey, those saying "deteriorate" increased by 8 percentage points while those saying "improve" dropped by 5 percentage points. 39% expected the employment situation would remain "unchanged", decreased by 2 percentage points.

Indices of Consumer Confidence, Consumer Sentiment and Employment Confidence are reported in Table 2.

The Index of Consumer Confidence is compiled from the scores of questions number 3, 4 and 5. The higher the index, the stronger is people's confidence about economic conditions.

The Index of Consumer Sentiment is compiled from the scores of questions number 1 to 5. A higher index indicates people are more optimistic about the present situation and future development of economic conditions.

The Index of Employment Confidence is compiled from the score of the sixth question. A higher index shows a stronger confidence about employment situation.

For the first two indices, the baseline is January 2000 (index = 100). For the Index of Employment Confidence, the baseline is February 2000 (index = 100).

The Indices of Consumer Confidence and Consumer Sentiment in September 2011 were 74.6 and 76.7 respectively, dropped by 7.4% and 9.1% from the June 2011 survey.

The Index of Employment Confidence was 69.1, went down by 13.6% from the pervious result, indicating a negative outlook towards the employment market conditions among the residents.
